1. K3|pebblestone Items

1.1 Sizes and Colours in Matrix

Products within fashion can have many different colours and sizes. To manage all these different product options in an efficient way, K3|pebblestone created the matrix throughout the whole system.

Products can also have 2 different size options and a colour option, for this K3|pebblestone has added an extra size option to the matrix, so it is possible to handle 3 dimensions in the matrix.

Take the jeans as an example, the waist and inseam are the size options and on top of that you have the colour of the jeans.

CODE	TOT...	28	29	30	31	32	33	34	36	38	40
BLACK	:										
28											
30											
32											
34											
36											
BLUE	:										
28											
30											
32											
34											
36											
Total											

Size ranges can differ per region/country and that's why it is possible in K3|pebblestone to setup a mapping for country specific size ranges. For example, in Europe you have 36, 38, 40 etc. and in Great Britain this is 10, 12, 14 etc. Customers can order in their region/ country specific size ranges.

For every colour a base colour can be assigned. It is also possible to work with uniform colour specifications like RGB and Hex codes.

Automatically create barcode numbers in several supported formats (EAN8/ EAN13 /EAN14/ GS1) and assign them to items and item variants, barcodes can be printed on item level. The barcode labels can also be printed based on a sales order or purchase order.

1.2 Item pictures

Pictures within K3|pebblestone can be setup on item level and could differ per colour level.

1.3 Seasons and Delivery Drops

Products within fashion are part of a season which can be broken down into delivery drops, for example Spring/Summer 1 or Spring/Summer 2. If a product is not part of a season then it is a NOOS product. The season and delivery drop within K3|pebblestone supports the specific way of working within fashion. These are more than just a field on the item card, these are also used when creating a sales order, purchase order and deliveries to customers.

When an item is successful it could become a Carry-over item, this means that the item is part of more than one season. You can attach different seasons on item and colour level and K3|pebblestone supports this and makes sure that the different seasons are linked to the item and colour.

1.4 Composition and Tariff no.

The Composition is created by choosing the raw materials and the corresponding percentages. The sum of the raw materials needs to be 100%, K3|pebblestone is checking this and the created Composition can be added to the item and material card.

The Composition and the Tariff no. can be setup on product or colour level. It is possible to set them up on item level and the values will be automatically copied to the colour level. If the composition and tariff no. is different than this can be changed on colour level.

For example, the white fabric is made of 100% cotton but the blue and pink fabric is a mix of 90% cotton and 10% polyester.

1.5 Wash and Care fact box

Wash and Care fact box attached to the item card shows how the product should be handled. K3|pebblestone comes with a standard set of Wash and Care instructions but these can be adjusted if needed.

1.6 Style and Fashion specific fields

A style is a higher level above the products which can group products together. When creating a Sales Order, the style can be used during order entry and you can choose products which belong to the style.

Other fashion specific fields which has been added to K3|pebblestone are Brand, Collection, Theme, Gender, Fit, Main Material No., Weave Type and Finish.

1.7 Material card

On the material card the following fields are available:

- The Weave Type specifies the construction of the fabric. What kind of construction is the fabric.
- Finish specifies how the material is finished.
- Width makes it possible to setup the width of the fabric.
- Shrinkage Length and Width % make it possible to setup the percentage of potential shrinkage of the fabric.

The screenshot shows the 'Item Card' for 'Fabric Jeans' (Item No. F-10004) in the K3|pebblestone system. The card is titled 'ITEM CARD | WORK DATE: 1/18/2018' and includes a 'SAVED' status. The card is divided into two main sections: 'Item' and 'More options'. The 'Item' section contains various fields for defining the material, including:

Item		More options	
No.	F-10004	Size Range Code

Are you interested in how this looks in K3|pebblestone? [Click here](#) and watch the demo video 'K3|pebblestone Items'. In just over 6 minutes we show how the Fashion specific Items are managed within K3|pebblestone.

2. Item phases within K3|pebblestone

When creating a collection, the items are going through different phases. The item phases within K3|pebblestone makes it possible to follow the lifecycle of the item, from Design to Closing Sales.

The total number of items in a specific Item Phase are displayed and by clicking on the number of pieces, the list of items is opened.

Item Phase Matrix									
CODE	DESCRIPTION	TOTAL	PRODUCT DEVELOPMENT	PRESALES	BUYING	DELIVERY	DIRECT SALES	CLOSING SALES	BLOCKED
NOOS	Never Out of Stock	-	-	-	-	-	-	-	-
2018SS	Spring/Summer 2018	-	-	-	-	-	-	-	-
2018FW	Fall/Winter 2018	16	-	-	-	-	-	16	-
2019SS	Spring/Summer 2019	27	-	-	-	-	27	-	-
2019FW	Fall / Winter 2019	37	-	-	-	37	-	-	-
2020SS	Spring/Summer 2020	22	4	18	-	-	-	-	-
2020FW	Fall / Winter 2020	-	-	-	-	-	-	-	-

Sometimes items will not make it through the final phase, for example during the Presales an item hasn't been sold enough and minimum buying quantities aren't met. The items will not be produced and need to be cancelled on the Sales orders.

Within the different item phases some processes are available and other aren't.

The items phases are linked to the item status, down below you see an overview of the various item phases and the processes which are available per item phases:

CODE	DESCRIPTION	SORTING	SAMPLES OPEN	SALES OPEN	PURCHASE OPEN	RECEIVING OPEN	DELIVERY OPEN	RETURNS OPEN	NO. OF ITEMS

Are you interested in how this looks in K3|pebblestone? [Click here](#) and watch the demo video 'Item phases within K3|pebblestone'. In just under 3 minutes we show how the Item phases and Item status work together to manage the lifecycle of items within K3|pebblestone.

3. Sales ordering within K3|pebblestone

3.1 Presales ordering

In the fashion industry, a substantial part of sales is achieved through Presales. Using samples, the representatives are selling collections, that will be delivered months later.

When creating a sales order, the attached order type presales will determine the behaviour during ordering. For presales items no stock and credit limited warnings will appear. The items are not in stock and the delivery of the items will be done months later. When the items are delivered, months later, the credit limited of the customers can be checked.

The season can be attached to the order type and this makes it possible that during sales order creation it is only possible to choose items of the attached season. If NOOS items are part of the Presales they can also be made available on the Presales order.

3.2 NOOS Ordering

Beside the presales collection you have also the in-season and NOOS collections. These items are in stock and will be delivered right away.

NOOS can also be setup in the order header and you can choose the items from the NOOS collection. When a NOOS order has been placed you send this directly to the warehouse so it can be picked. During ordering the stock information is available.

3.3 Ordering for distributors

Distributors are responsible for different brands and during sales order creation it is important to take the brand as a starting point.

Within K3|pebblestone it is possible to choose the brand on the sales order and this will filter the items for the attached brand.

The payment conditions per brand could differ based on the customer, customer price group or country. K3|pebblestone makes it possible to set this up so during sales order creation the correct payment conditions is attached automatically on the sales order.

3.4 Ordering through Ratio Curve

Easy order entry using ratio curve templates, which include distribution in values over colours. After using the ratio curve on the sales orders, it is possible to change the quantities and the ratio curve is not stored any more.

Are you interested in how this looks in K3|pebblestone? [Click here](#) and watch the demo video 'Sales ordering within K3|pebblestone'. Little under the 6 minutes we show all the options of Sales order creation within K3|pebblestone.

4. Sales Prices

4.1 Sales prices in different currencies

When a company is operating in different countries with different currencies it is possible to automatic calculate the prices based on the currency exchange rate, including commercial rounding method.

The functionality is available on the unit price and the recommended retail price.

Line Type ↑	Sales Type ↑	Sales Code ↑	Type ↑	Unit of Measure Code ↑	Minimum Quantity ↑	Line Discount %	Unit Price	Unit Price (EUR)	Unit Price (SEK)	Unit Price (USD)	Starting Date ↑
Sales Price	Customer Price/Disc. Group	EU	Item		0,00	0,00	85,00	131,95	858,95	131,95	
Sales Price	Customer Price/Disc. Group	NATIONAL	Item		0,00	0,00	82,50	127,95	833,95	127,95	
Sales Price	Customer Price/Disc. Group	NATPRESALE	Item		0,00	0,00	81,00	125,95	818,95	124,95	

4.2 Order Type Pricing

Prices can be different based on the order type of the sales order. If a customer is ordering the K3|pebblestone dress during the presales the price of the product is lower compare to when that same dress is re-ordered during the season.

Are you interested in how this looks in K3|pebblestone? [Click here](#) and watch the demo video 'Sales Prices'. Within 2 minutes we show all the options around Sales Prices within K3|pebblestone.

5. K3|pebblestone Presales Plan

This is the way a presales process for the Spring/Summer 2020 collection could look, starting presales of the collection in June, and closing the season with the closing sales in March the next year.

The green marked activities are specific for fashion wholesalers and during these activities it is crucial to have insight in the product development, sales and purchase of the collection. This is the reason why K3|pebblestone created a dashboard around this whole process. This is not a BI dashboard where you can only look at the information, but a dashboard from where decisions can be made, and process can start.

From gathering the presales sales orders, making replacement and cancellation decisions up to the creation of the purchase orders and closing the season. All managed from one dashboard which shows updated information and allows the wholesaler to make the accurate decisions.

6. Cancellations and Replacements within K3|pebblestone

In the fashion industry, a substantial part of sales is achieved through presales. Using samples, the representatives sell collections that will be delivered months later.

During the presales period certain items prove to sell better than others. Some items may sell so poorly that the decision is made not to purchase or produce them. At that moment, the samples of the items concerned are taken out of the salesmen sample collection and in the remaining part of the presales period they focus on the items that do sell well. In that case, the company must decide what to do with the sales orders already created for the now cancelled items – these need to be adjusted.

Within K3|pebblestone we have advanced functionality to manage the replacements and cancellations in an efficient way. K3|pebblestone searches for all the sales orders that contain the relevant replacement or cancelled items. Actions can be set up to adjust the sales orders, by cancelling the items or replacing the items with similar items, in an automated way.

Manage Process Report More options

EDIT - REPLACEMENT - REPL-000001

General

K3|pebblestone keeps track of these adjustments so you can report on them later. Gain and loss amount can be automatically registered.

The customers can be informed about the cancelled or replaced items through the cancellation confirmation which will be created when items are cancelled or replaced.

Are you interested in how this looks in K3|pebblestone? [Click here](#) and watch the demo video 'Cancellations and Replacements within K3|pebblestone'. In around 4 minutes we show how cancellations and replacements are managed within K3|pebblestone.

7. Purchase order creation within K3|pebblestone

When all the presales orders are placed and the cancellations and replacements are done, the purchase orders can be created within the presales plan. Within the presales plan it is possible to add additional quantity to the purchase order.

Page

Quantity on presales orders and the order threshold is available as a statistic value. In the above example the total amount on the purchase order will be 220 pieces. 186 pieces are needed to delivery the items ordered on presales orders and the 44 pieces is extra stock available for reorders.

NOOS items can be part of the presales buying process and delivered together with the season products, if NOOS is part of the setup of the season.

Are you interested in how this looks in K3|pebblestone? [Click here](#) and watch the demo video 'Purchase Order creation within K3|pebblestone'. In around 1,5 minutes we show how the Purchase orders are created including additional stock, if needed.

8. End of Season cancellations within K3|pebblestone

Just before the closing sales start, all the outstanding quantities need to be cancelled, so there is a clear view of the available items for the closing sales. At this moment, no customer will accept a delivery at full price. This is the moment when a stock list is created and sent to customers, so they know what they can reorder, with discount.

9. Item Supply Planning within K3|pebblestone

The Item Availability fact box is specially created by K3|pebblestone to give the user information around the availability of the item. You find this fact box on the Item list and item card. When clicking on the quantity the matrix is opened and you can look at the quantity divided over the colours and sizes.

The screenshot shows the 'ITEM CARD' for item 10059, 'Dress polo uni'. The card is divided into several sections:

- Item Details:** A grid of fields including No. (10059), Brand Code (AWESOME), Description (Dress polo uni), Gender Code (WOMEN), Base Unit of M... (PCS), Fit Code, Item Phase Code (DELIVERY), Size Range Code (WOMEN), Season Code (2020SS), 2nd Size Rang..., Delivery Drop... (1), Available Colors (2, click to change...), Item Category... (DRESSES), Composition C..., Collection Code (SPORTS), and Style No.
- Inventory:** Fields for Shelf No., Net Weight (0), Search Descrip... (DRESS POLO UNI), Gross Weight (0), Prevent Negati... (Default (No)), and Unit Volume (0).
- Picture:** A photograph of a dark blue polo dress with white lettering.
- Item Availability:** A fact box showing:

Inventory	120
Availability	330
Qty. on Purch. Order	510
Qty. on Sales Order	300

When the purchase orders are due the wholesaler needs insight in which items are being delivered by the vendors. The item supply planning gives insight in when the items can be expected and in case of a delay the customer can be informed about this. The overview could also help to plan the work in the warehouse.

Are you interested in how this looks in K3|pebblestone? [Click here](#) and watch the demo video 'Item Supply Planning within K3|pebblestone'. Within 2 minutes we show how K3|pebblestone gives insight in stock availability and due dates of outstanding purchase orders.

10. K3|pebblestone Receipt Worksheet

The receipt worksheet enables the user to handle receipts for multiple purchase orders and sales return orders in one time. The filter options like, item number, vendor name or delivery drop make it possible to create a worksheet with a subset of the items. This way the warehouse can focus on the products which are relevant for that moment.

Batch Name: GENERAL

Manage Open Matrix Calculate plan... Carry out plan | Actions | Navigate | Fewer options

Document No.†	Vendor / Customer No.	Item No.	Description	Location Code	Matrix Quantity	Matrix Qty. to Receive	Matrix Outstanding Quantity	Auto Cancel Remai...	Expected Receipt Date
→ 106159	100	10002	T-shirt multicoloured	MAIN	24	24	24	<input type="checkbox"/>	2/8/2018
106162	123	10025	Skirt uni	EAST	196	196	196	<input type="checkbox"/>	8/15/2019
106162	123	10023	Short uni	MAIN	32	32	32	<input type="checkbox"/>	6/15/2019
106162	123	10025	Skirt uni	MAIN	140	140	140	<input type="checkbox"/>	8/15/2019
106162	123	10025	Skirt uni	WEST	336	336	336	<input type="checkbox"/>	8/15/2019

After checking and confirming the received quantity the receipt worksheet can be posted and all the items are placed in stock.

12. K3|pebblestone Delivery Plan

The K3|pebblestone delivery plan enables you to handle deliveries for multiple sales orders in one time. When creating a delivery plan various filters can be set, which allows you to focus on a subset of the available deliveries.

The delivery plan shows the summary of the outstanding items and the items which can be delivered. When happy with the results you push the button and all the inventory picks or sales shipments are printed.

When releasing a delivery worksheet, the credit limit and the balance check will be performed. When the planned shipment is failed the credit limit, or the balance check an approval is sent to the finance department and the status of the planned shipment becomes pending for approval. After the approval of the finance department the planned shipments can be send. The not approved shipments will stay in the delivery worksheet.

Are you interested in how this looks in K3|pebblestone? [Click here](#) and watch the demo video 'K3|pebblestone Delivery Plan'. Within 3 minutes we show how all sales orders are placed in the K3|pebblestone Delivery Plan and how delivery disicions can be made.

13. Demo videos available within K3|pebblestone

Demo videos are available within the solution. In the example down below for the presales plan an additional fact box with the relevant demo videos has been added. This way the demo videos are always available to watch when additional explanation is needed.

The screenshot shows the 'EDIT - PRESALES PLAN' interface. At the top, there are navigation buttons: 'Edit List', 'Propose New Item Phases', 'Apply New Item Phases', 'Create Purchase Orders', 'End of Season Cancellations', 'Open Matrix', 'Open in Excel', and 'More options'. Below this is a 'Filters' section with fields for 'Season Filter' (set to 2020SS), 'Delivery Drop Filter', 'Order Threshold Filter', 'Item Phase Filter', 'Item Filter', and 'Location Filter'. The main area is a table with columns: Item, Code, Description, Qty on Presales Order, Additional Qty to Purchase, Total Demand, Order Threshold, Threshold Coverage, Ignore Order Thres., Item Phase Code, New Item Phase Code, and New Item. The table lists items like 'T-shirt print', 'T-shirt multicoloured', 'Top uni', and 'Top print'. On the right side, there is a 'Picture' section showing a pink tank top and an 'Instruction Video's GETTING STARTED' section with three video thumbnails: 'Presales Plan Overview', 'Cancel or Replace Items', and 'Purchase Items'. A red arrow points from the text above to the video thumbnails.

On the item card.

The screenshot shows an 'ITEM CARD' for '10003 · T-shirt print'. At the top, there are navigation icons and a 'SAVED' status. Below the title, there is a notification banner: 'We have created a short video that explains how to create an item in k3|pebblestone. Start Video | Don't show this notification again.' Below the notification, there are tabs for 'Process', 'Item', 'History', 'Actions', 'Navigate', and 'Fewer options'. The main section is titled 'Item' and contains various fields: 'No.' (10003), 'Description' (T-shirt print), 'Base Unit of Measure' (PCS), 'Item Phase Code' (DIRECT SALES), 'Season Code' (2019SS), 'Delivery Drop Code' (2), 'Item Category Code' (SHIRTS), 'Collection Code' (CASUAL), 'Brand Code' (AWESOME), 'Gender Code' (WOMEN), 'Theme Code', 'Fit Code', 'Size Range Code' (XXS-SXL), '2nd Size Range Code', 'Color Group Code', 'Available Colors' (4, click to change...), 'Composition Code', 'Style No.', and 'Last Date Modified' (10/20/2019). A red arrow points from the text above to the notification banner.

By clicking on the videos, the videos can be watched within K3|pebblestone right away.

The screenshot shows a video player interface. The video title is 'November 2019 Release | Presales Plan'. The video content features a woman holding a blue umbrella against a cloudy sky, with the text 'K3 | pebblestone Presales Plan' and 'k3pebblestone' overlaid. The video player includes a progress bar at the bottom showing '0:02 / 3:31', a 'Watch later' button, a 'Share' button, and a 'Close' button. The video is hosted on YouTube.
