# Introduction

In this release we resolved several bugs which have been reported to us. You can find the details of the additional features in this Release Note.

## **7963 Error when invoicing an order with quantity with decimals**

When you use a quantity with decimals on a sales order and try to invoice. There was an error message “overflow” under conversion”.

## **8054 Error on purchase order when opening matrix with 2<sup>nd</sup> size item**

When opening a matrix for a second size item in a purchase order this will give an error message “the record in table matrix line buffer already exists”

## **7896 No Item Phase check on Item Journal lines**

The system does not execute an Item Phase status check (sales / purchase block, etc..) in the item journal lines.

## **7803 Delivery Worksheet doesn't support 2nd Size Code**

The Delivery Worksheet lines has now the 2nd Size Code and 2nd Size Range Code fields.

## **7949 Wrong Delivery Priority Code on Sales Lines**

The Delivery Priority Code of Sales Lines is now derived from the Sales Header and no longer copied directly from the Customer Card.

## **7949 No Delivery Priority Code for Ship-to Address**

It is now possible to select a deviating Delivery Priority Code on a Ship-to Address compared to the Customer Card.

## **7757 Wrong alignment of quantity in the matrixes on several reports**

Because of a change in Standard BC the quantities in the matrixes on several reports where no longer aligned on the right side of a cell. This has now been corrected.

## **8059 Item Samples are not created when Season Code is not filled**

For Items without a Season Code the Item Sample Variants are now created as well.
