# Introduction

In this release we resolved several bugs which have been reported to us.

Please check these release notes for more details.

# 1. K3|pebblestone

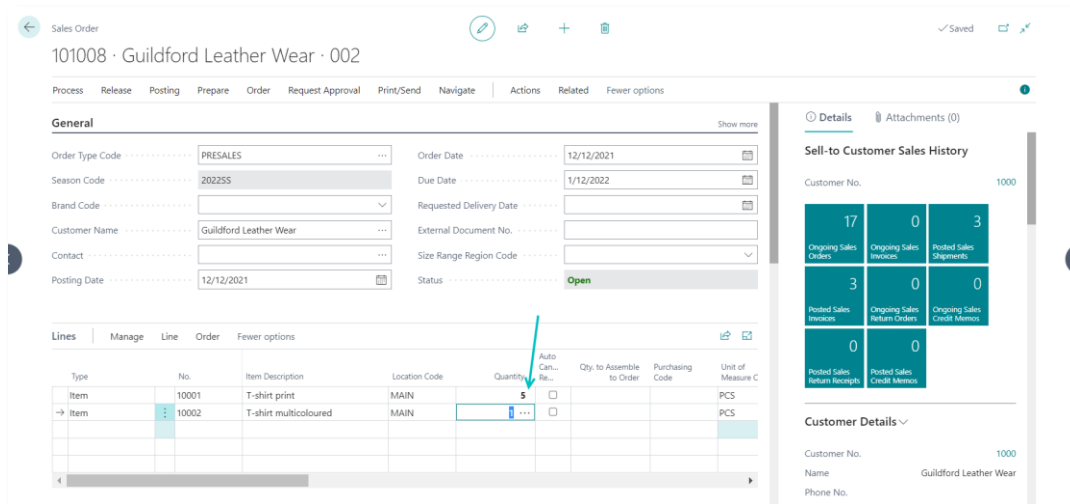

## 10732 Copy item: save item colour option

The option in the Copy item, item colour, is not saved like all the rest of the available options, this has been corrected.

## 2. Known issue within K3|pebblestone BC19.0.

When an item has been added to a document (for example Sales order) and contents of more than one variant, the 3 dots to reopen the matrix will not be available. If you only have added one variant this option is still available.

The issue has been raised with Microsoft and will be solved in one of the next minor releases.

The matrix still can be opened the follow ways:

- CTRL M
- Process > Open Matrix.
